

SMART[®] SoundLift

Make every voice heard

Engineered for learning environments, SoundLift amplifies the teacher's voice through a wearable microphone and integrated speakers on SMART displays, reducing vocal strain for teachers and assisting all students. Available for retrofits or new projects.

Did you know? SoundLift uses SMART's advanced feedback-suppression technology, letting teachers write on the display and deliver clear instructions simultaneously.

From hello to HELLO!

FE/HE tutors talk all day, every day. SoundLift reduces the strain on their vocal cords letting teachers speak naturally and still reach the whole class. Better sound, better energy, better learning.

Inclusivity feels heard

One simple upgrade, one big impact. With crisp voice pickup, SoundLift powers more accurate AI tools such as transcriptions and translations, assisting all students, in-class or remote, absorb and process information faster and more easily.

Keep classes flowing

SoundLift amplifies the teacher's voice whilst lesson audio plays through the interactive display, allowing both to be heard clearly at the same time, so lessons continue without interruption – no muting, no switching.

Engineered for ease

SoundLift is designed for effortless use, from first unboxing to everyday teaching.

- ✓ Works with existing iQ4-enabled SMART displays (MX-V5 and RX series)
- ✓ Two microphones for teacher and student interaction
- ✓ Pre-paired out of the box
- ✓ Up to 98ft/30m wireless range
- ✓ Up to 12 hours of use*
